

Jumble

Vishal Hada, Russell Harter, James Liu

Problem:
Too many different services that we use daily.

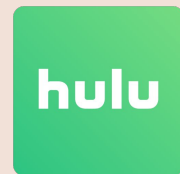

Social Media

Messaging

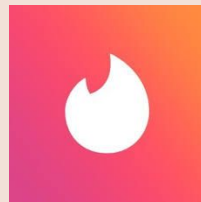

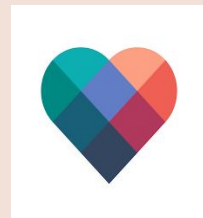

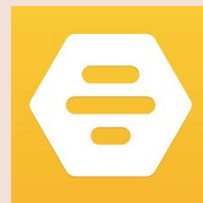

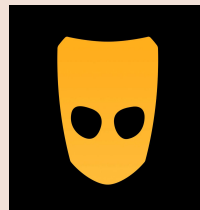

Streaming

Game Launchers

Dating

Solution:

Jumble

Your "Home Base"

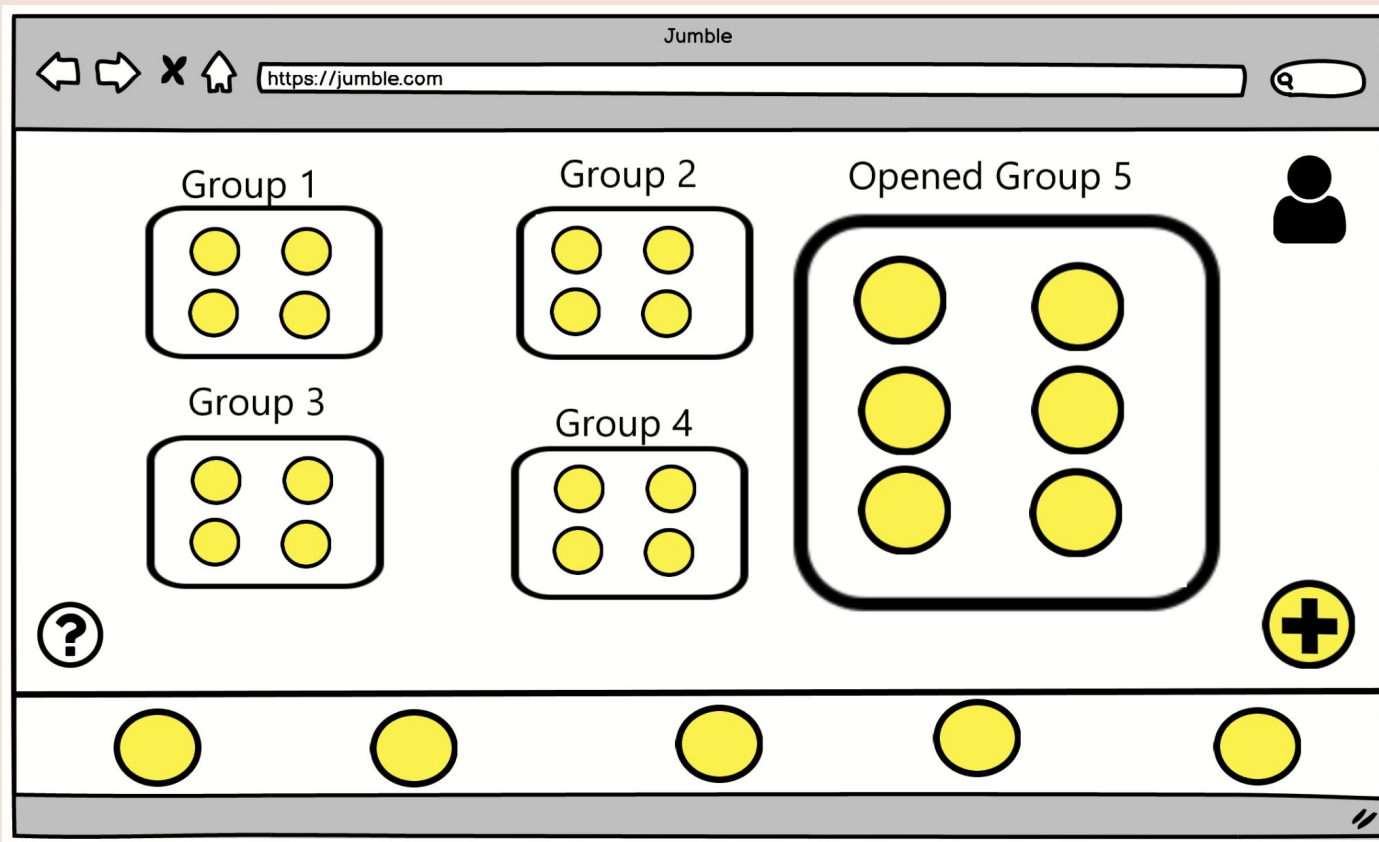

How It Works

- One site one page
- You just open it up and then you had all your services available to you
- Simply click on any of them to open the respective service
- Notable features:
 - Auto open site when Jumble is opened
 - Synchronizes across devices
 - Login info saved for all the services if desired
 - Customizability!

Customizability!

- Change the appearance of the website - users can select from a variety of themes to change how the website looks to suit their tastes
- Users can organize and customize the services by moving them around and placing them into groups
- Users add and remove services that they want to be shown on the main page

Technologies

HTML/CSS/JS

MariaDB/PHP/JSON

Extended Ideas

Add rich presence integration - similar to PreMiD for Discord

More in-depth user profiles - friends, friend activity, chat system

Display feeds inside the website instead of redirecting you to the service

Notifications for the services connected to your account

Notes/Reminders

More customizability - user created themes, change the layout of the website

TIKTOK YAYYY
